

Wellness & savings are in sight

Our Humana Vision Plan focuses on providing the best vision care for you and your family's whole eye on health along with the ability to save.

Humana Vision offers:

Choice of providers close to home

Members will find plenty of local providers nearby with a choice of more than 135,000 participating providers, including independent, retail and online options. You also have access to eye care services.

Limitations and Exclusions:

In addition to the limitations and exclusions listed in your "Vision Benefits" section, this policy does not provide benefits for the following:

1. Any expenses incurred while you qualify for any worker's compensation or occupational disease act or law, whether or not you applied for coverage.
2. Services:
 - That are free or that you would not be required to pay for if you did not have this insurance, unless charges are received from and reimbursable to the U.S.

Vision health impacts overall health

Routine eye exams can lead to early detection of vision problems and other diseases such as diabetes, hypertension, multiple sclerosis, high blood pressure, osteoporosis, and rheumatoid arthritis¹.

You should independently verify the Health Maintenance Organization and Health Maintenance Organization before

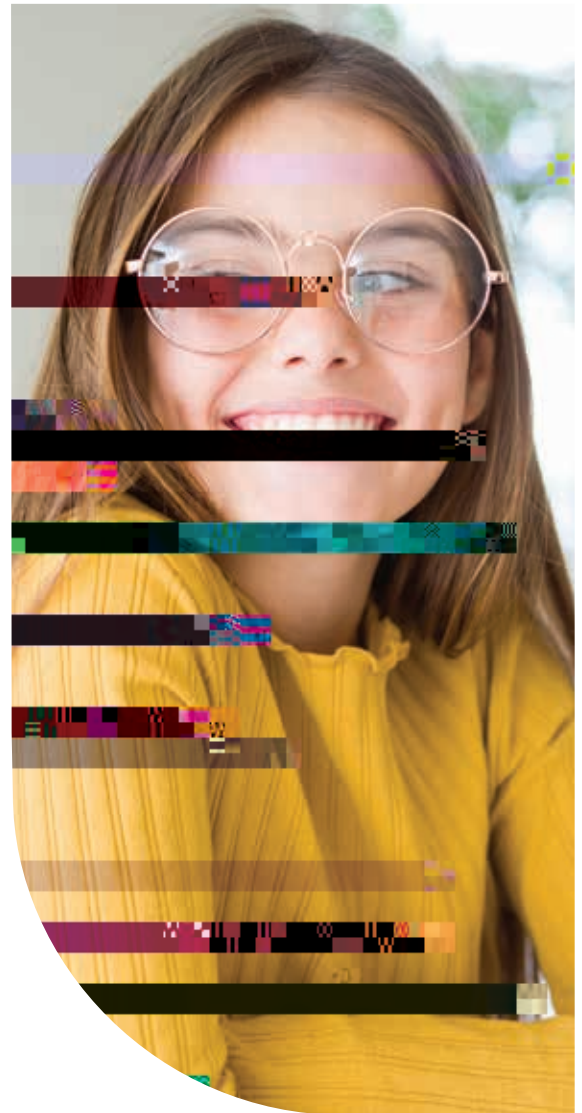

Make sure your child sees a brighter future

Good vision is a part of good overall health

Health vision is an important part of childhood development. It's a long-term predictor of academic performance in school-age children.¹ That's why we recommend a child's health care provider check vision.

How often should my child's vision be checked?

The American Ophthalmological Association (AOA) recommends that children have an eye exam at 6 months, 3 years of age, before entering school and then every two years. According to the AOA, early detection and treatment of eye problems so a child can see clearly.

Diabetes can affect sight

If you're having difficulty seeing, it may be a sign of diabetes.

What is diabetes?

Diabetes is a disease in which the pancreas cannot produce enough insulin or the body cannot use insulin efficiently.¹ In addition, it can lead to complications such as blindness, kidney failure, and heart disease. The American Diabetes Association
